[P2pays.org](#) and the Recycle Guys

P2pays.org is a comprehensive website dealing with recycling and greening issues throughout North Carolina. At this site you can find out everything from how to recycle at home to what local businesses recycle and much much more. The North Carolina Division of Pollution Prevention and Environmental Assistance (DPPEA) is also responsible for the Recycle Guys campaign. This is a program designed to educate children about the benefits of recycling and encouraging kids to recycle at home. The program has enjoyed great success so far. Even our own WWC Recycling crew members have been going to local elementary and pre-schools with the Recycle Guys campaign to help promote recycling. Check out the site and learn more about recycling in North Carolina than you ever hope to imagine.

Cooking Oil Recycling Program

The Cooking Oil Recycling Program is a pilot project for providing used oil recycling services to Asheville and surround cities. Funded by the Biofuels Center of North Carolina, the COR program is the first of its kind within the region. Recycling your used cooking oil reduces waste, improves air quality, and creates clean energy in our local community.

The Metropolitan Sewerage District (MSD) of Buncombe County, in collaboration with Blue Ridge Biofuels and Green Opportunities (GO), needs your help to keep used cooking oils and greases out of the sewers and landfill and divert them into biodiesel production to be sold back to the community as clean, renewable fuel.

Locally-made recycling bins for used cooking oil are being placed across the City of Asheville and neighboring counties.
